5 Codes of Conduct

Introduction

- Organisational codes of conduct provide members with a set of expectations for appropriate behaviour within their respective communities. Detail and prescription are both possible in such recommendations; alternatively, they may be expressed more generally to communicate the principles and standards that should govern behaviour and decision-making.
- Two of the most important sets of guidelines for engineers are professional codes created by organisations worldwide and corporate codes created by the divisions of corporations that employ engineers.
- Standards of behaviour are often put in place to add more requirements on top of what is already required by law. Typically, the same community that establishes a set of norms is also responsible for enforcing those norms.
- Codes of conduct are developed for a variety of reasons, the first one being to increase members' sense of accountability to external stakeholders, the second for improving an industry's or an organisation's standing in the public eye, and the third to foster greater moral discernment.
- There are three main sorts of codes of conduct that may be identified by their goals.
    - A professional or government agency's aspirational code should reflect the group's shared beliefs. The purpose of a code of ethics is to communicate to outsiders the standards to which a certain profession or organisation is dedicated.
    - An advisory code's goal is to help experts and employees make moral choices in the job in accordance with the community's generally accepted norms and values.
    - The purpose of a disciplinary code is to ensure that all professionals and workers adhere to a set of standards and expectations.
- Most engineering professional codes are only meant to be used as guidelines, and their unique goals include the following points.
    - Helping to analyse these moral dilemmas and identify important questions or concerns pertaining to them
    - Improving the profession as a whole by raising professionals' awareness of and concern for ethical considerations
    - To ensure that all workers perform in accordance with specified norms, many companies and departments implement codes of conduct, which are often punitive in nature
    - To aid in reaching a decision on these ethical dilemmas

Professional Codes

Professional codes are guidelines for the exercising of a profession and are formulated by a professional society. Professional codes have been formulated for a variety of professions, such as doctors, nurses, lawyers, accountants, etc. Also, engineers have professional codes of conduct.

Profession

- Numerous professions, including medicine, nursing, law, accounting, etc., have developed their own sets of standards for business behaviour. Standards for practising a certain profession and professional codes are developed by organisations representing those in that field.
- Working in a profession requires specialised training, adherence to ethical standards set by others in the field, and teamwork for the greater welfare of society.
- Self-regulation, often known as 'autonomy of the profession,' provides the foundation upon which professionals may make independent decisions in the course of their job. The public generally recognises and defers the authority of well-established professional

organisations in matters, such as establishing entry requirements, writing and enforcing codes of ethics and behaviour, and acting as advocates for their profession in government and the public sphere.

- Professional training in one or even more fields of systematic knowledge and some wider courses in the liberal arts are usually required to acquire the level of skill needed to do the task (humanities, sciences, and arts). Professionals need to combine their technical expertise (knowing-how) with theoretical understanding (knowing-that) to make decisions that are not always straightforward to automate. It is customary practise to regularly update one's skill set and educational background via formal and informal means.
- The profession makes a concentrated effort to uphold high ethical standards as a whole because it serves the public good or some component of the public good. The goals of medicine, law, and engineering, for instance, are all oriented towards improving the health and the safety of the general populace. Professional ethical codes spell out the goals and standards for those who work for the public benefit.
- The profession may be defined as an activity that has certain defining features. No two people will agree on what makes a job a 'profession,' though.

Meaning of Professional

- A professional is driven to assist others, maintains trusting relationships at work, and abides by a high standard of ethics. Professionals, by definition, apply their specialised knowledge and skills to the resolution of non-standard situations.
- The National Society of Professional Engineers (NSPE) in 1976 identifies five characteristics of a professional engineer.
    - One who possesses a body of distinctive technical knowledge and art gained by education, research, and experience.
    - One who recognises a service motive to society is vital and honourable activities.
    - One who believes in standards of conduct, such as represented by ethical rules.
    - For one who supports the legal status of admission to the profession, the most common forms are registered to practice engineering and graduation from an accredited engineering curriculum.
    - One who has pride in the profession and a desire to promote technical knowledge and professional ideals.
    - In addition to these five characteristics, Dougherty's definition identifies a sixth factor that should be emphasised as a fundamental characteristic, 'a professional engineer must work in a relation of confidence to his employer, the public, and all who use his or her works.' These characteristics represent the six fundamental dimensions of a professional engineer.

Evolution of Codes

- Science and technology got a bad rap when the Nazis used them in gas chambers and human experimentation during World War II (WWII). Early regulations mostly addressed matters of etiquette for engineers. This altered after the World War II when codes started taking into account the larger societal challenges that engineering always raises.
- The German Engineers' Association, VDI abbreviated as Verein Deutscher Ingenieure created a commitment for engineers in 1950, perhaps in response to the dubious acts of several scientists and engineers during the World War II. After World War II, the scientific and engineering communities worked to restore their credibility by establishing professional standards. The code of conduct for professionals states that they should not work with organisations that violate fundamental human rights.
- After the World War II most professional codes in the United States were revised, placing more emphasis on engineers' responsibilities to the public good. The National Society of Professional Engineers (NSPE), the American Society of Civil Engineers (ASCE), and the American Society of Mechanical Engineers

(ASME) have all established codes of ethics outlining the standards of behaviour expected of engineers.

'Should hold paramount the safety, health, and welfare of the public.'

- German and French engineers founded FEANI in 1951. At least 29 European countries are represented by FEANI members. FEANI has prepared a common view on engineered solutions conduct that its affiliates may put in their respective codes of conduct. Due to its unique status, the FEANI value is far broader (and misleading) and contains less information than the NSPE code. The European Federation of National Engineering Associations (FEANI) represents Europe's national engineering organisations.
- The substance of engineers' professional responsibilities is outlined in the relevant rules of conduct. They articulate the shared ethical principles and standards of the field.
- The three primary areas to which most contemporary professional codes pertain are given below.
  - Fulfilling one's commitments to one's employers and customers
  - Doing one's job with honesty and integrity, as well as, in a manner befitting one's qualifications
  - Assuming one's societal and public responsibilities

Integrity and Competent Professional Practices

- The commitment to practise one's job with honesty and integrity and in a manner that is commensurate with one's level of expertise is included in all professional codes. When one talks about a profession having to be practised in an honest, loyal, and true way, the person is referring to the concepts of integrity and honesty. This entails, for example, that the facts cannot be twisted in any way, and that all commitments must be honoured.
- The practitioner has to have the necessary skills, and the professional work itself needs to be done in an adept manner. This indicates that the professional must possess an adequate level of education, must remain current in his profession, and must restrict his labour to those tasks that fall within his area of expertise.
  - Engineers shall perform services only in the areas of their competence (NSPE Code of conduct).
  - Engineers shall issue public statements only in an objective and truthful manner (NSPE Code of conduct).
  - Engineers shall not be influenced in their professional duties by conflicting interests (NSPE Code of conduct).
  - Engineers shall maintain their relevant competencies at the necessary level and only undertake tasks for which they are competent (FEANI).

Obligations Towards Clients and Employers

Most professional rules of conduct include language on duties owed to one's employer. Engineers are often required by contract to act in their companies' best interests and to keep secret any proprietary information they are exposed to while on the job.

- Engineers shall act for each employer or client as faithful agents or trustees (NSPE code of conduct).
- Engineers shall not disclose, without consent, confidential information concerning the business affairs or technical processes of any present or former client or employer, or public body on which they serve (NSPE code of conduct).
- Engineers shall provide impartial analysis and judgement to employers or clients, avoid conflicts of interest, and observe proper duties of confidentiality (FEANI).

Social Responsibility and Obligations Towards the Public

A small number of professional rules state that engineers have a responsibility to educate the public on matters of safety related to the technologies in which they are engaged. Professional norms from throughout the world stress engineers' duty to society. Safety, health, environment, and the general public's best interests are all topics that come up often.

- Engineers shall hold paramount safety, health, and welfare of the public (NSPE Code of conduct). Engineers shall at all times strive to serve the public interest (NSPE Code of conduct).
- Engineers are encouraged to adhere to the principles of sustainable development to protect the environment for future generations (NSPE Code of conduct).
- Engineers shall carry out their tasks to prevent avoidable danger to health and safety and prevent avoidable adverse impacts on the environment (FEANI).

Values in Codes

Honesty, competence, integrity, impartiality, truth, respect, fairness, knowledge, secrecy, hard work, loyalty, and fidelity are all values reflected in codes. An examination of any code of ethics in any field will reveal that human values are paramount to the underlying concepts.

Possibilities and Limitations of Codes of Conduct

- Many concerns have been raised throughout the years; however, about the code of behaviour. Codes of behaviour, as seen, serve to articulate the obligations of engineers. In the following paragraphs, the most common criticisms have been addressed.
- When weighing these concerns, it is important to remember that various standards of behaviour serve different purposes. Codes of conduct, whether aspirational, advising, or punishing, all bear discussion. Not all valid criticisms of disciplinary rules may be applied to advisory codes and vice versa. An enormous amount is dependent on how the code is actually formulated and implemented. Although, the following arguments highlight some of the restrictions imposed by codes of conduct, they do not provide sufficient evidence to suggest that such regulations should be avoided.

Codes of Conduct and Self-Interest

- Codes of conduct are a form of self-regulation. Sometimes, they are primarily formulated for reasons of self-interest.

Vagueness and Potential Contradictions

- Codes of conduct might provide conflicting guidance on how to behave in a given circumstance because of differences in how different people understand the same ideas and principles. One is often met with somewhat vague notions and norms that require interpretation when applying standards of behaviour to real circumstances. The concept of loyalty is important in rules of behaviour but needs further explanation and interpretation.
- Besides ambiguity, discrepancies both inside and across standards of conduct are another problem that may arise. Take a look at how three distinct codes of conduct handle issues of information secrecy and disclosure.

National Society of Professional Engineers (NSPE)

- Engineers shall not reveal facts, data, or information without the prior consent of the client or employer except as authorised or required by law or this code.
- Engineers having knowledge of any alleged violation of this code shall report thereon to appropriate professional bodies and, when relevant, also to public authorities, and cooperate with the proper authorities in furnishing such information or assistance as may be required.

European Federation of National Engineering Associations (FEANI)

Engineers shall observe proper duties of confidentiality. Engineers shall be prepared to contribute to the public debate on matters of technical understanding in fields in which they are competent to comment.

Institute for Electrical and Electronics Engineers (IEEE)

- The members of the IEEE agree to accept responsibility when making engineering decisions consistent with the safety, health, and welfare of the public, and to disclose promptly factors that might endanger the public or environment.

- There are important differences between these three codes. The IEEE code does not contain a confidentiality requirement, while the other two do.
- The explanations that are given why codes of conduct are morally binding.
- An explanation may be that ethical standards constitute an unspoken agreement between the technical community and public at large. In this view, professionals serve an ethical ideal in return for benefits like higher prestige, exclusive access to doing their work, and higher pay. According to this view, professionals must abide by ethical standards because they have implicitly agreed to terms with the public good. This agreement establishes a legal duty to perform in accordance with the standards of one's chosen profession.
- Michael Davis provides a different interpretation. "A profession is a number of individuals in the same occupation voluntarily organised to earn a living by openly serving a certain moral ideal in a morally-permissible way beyond what law, market, and morality would otherwise require," he writes. One key aspect of this concept is that professional status is a matter of personal preference. Davis argues that this decision has been made because engineers have established professional codes. Being a part of a profession entails entering into an unspoken agreement with other members of that profession, making such norms enforceable. This agreement establishes a fairground on which all professions may work for a better world.

NSPE Code of Ethics for Engineers

Preamble

Engineers are held to a higher degree of integrity and honesty than the general public. The discipline of engineering calls for a significant amount of schooling and experience. The discipline of technology has a significant and immediate impact on the level of life enjoyed by all members of society. Techs have an obligation to put the safety, security, and well-being of the public at large first at all times, and their line of work requires nothing less than perfect integrity.

Fundamental Canons

Engineers, in the fulfillment of their professional duties, shall obey the following.

- Hold paramount safety, health, and welfare of the public
- Perform services only in areas of their competence
- Issue public statements only in an objective and truthful manner
- Act for each employer or client as faithful agents or trustees
- Avoid deceptive acts
- Conduct themselves honourably, responsibly, ethically, and lawfully to enhance the honour, reputation, and usefulness of the profession

Rules of Practice

Engineers shall hold paramount safety, health, and welfare of the public.

- Without the approval of the client, techs must not provide any data or expertise.
- If an engineer's sound judgement is overcome and there is a danger to people or property, they must report it to their company.
- Techs must not approve of or become involved with any organisation or person they suspect of engaging in corrupt behaviour.
- Engineering documents will be approved by the programme's experts only after they have been checked to ensure they adhere to all applicable standards.
- If an engineer learns of a potential violation of this code, they must tell the appropriate companies and, if necessary, government bodies, and assist those officials by giving whatever additional help they request.
- It is against the law for engineers to help anyone who is engaging in the illegal practice of the profession.

Explanation of Rules of Practice

- Engineers shall perform services only in the areas of their competence.
  - Experts are only employed to operate on initiatives for which they have had specific education or experience.

- Engineers are not permitted to put their stamp on works that they did not personally create or that are outside of their areas of competence.
- Just the competent techs who created a specific operational segment need to sign the engineering documents for that segment.

- Engineers shall issue public statements only in an objective and truthful manner.
  - All information pertinent to the problem at hand must be included in the report, statement, or testimony, and the date of its most recent modification must be included. Engineers must always be fair and impartial in their review.
  - As long as their opinions are supported by data and expertise, specialists may confidently express their professional assessments.
  - No engineer shall make any public remarks, critiques, or arguments on technical topics for the benefit of any interested party.
- Engineers shall act for each employer or client as faithful agents or trustees.
  - Techs must disclose any personal or business ties that might compromise their objectivity or credibility.
  - Without the permission and agreement of all parties concerned, engineers may not accept remuneration or other compensation from any other entity or individual other than the entity or organisation he/she is working on.
  - Techs shall not accept money or other valuable remuneration from the outside agency in the course of their work.
  - When it comes to planning that potentially impacts the conditions of private or governmental engineering services given by the engineer's company or consulting business, engineers who are members, or employees of a governmental organisation are barred from participating.
  - No person on the company's management team may serve in any capacity for a government department in which the firm is interested in doing business.
- Engineers shall avoid deceptive acts.
  - Engineers must be honest about their experience and education and must not knowingly allow their credentials or those of their colleagues to be misrepresented. There will be no fabrication or exaggeration of their role in previous projects. No material used in connection with a job search should omit or falsify significant information about an organisation, services, workers, partners, or successes.
  - Experts are not allowed to offer any form of bribery to get a job. They are not allowed to make or receive any contribution that could be used to affect the outcome of government authority to grant a project or that would be perceived by the public to go towards that reason.

Professional Obligations

- Engineers shall be guided in all their relations by the highest standards of honesty and integrity.
  - Engineers shall acknowledge their errors and shall not distort or alter the facts.
  - Engineers shall advise their clients or employers when they believe a project will not be successful.
  - Engineers shall not accept outside employment to the detriment of their regular work or interest. Before accepting any outside engineering employment, they will notify their employers.
  - Engineers shall not attempt to attract an engineer from another employer by false or misleading pretences.
  - Engineers shall not promote their own interests at the expense of the dignity and integrity of the profession.
- Engineers shall at all times strive to serve the public interest.
  - Project documentation that deviates from an accepted practical application cannot be finalised by a qualified expert or bear the expert's signature.
  - Experts are encouraged to give back to society by improving consumer safety

and mentoring young folks in their chosen fields.
    - Engineers, as a group, should work to raise the public's appreciation for engineering's achievements.
    - To preserve our planet for future generations, it is imperative that engineers practise sustainable development.
- Engineers shall avoid all conduct or practice that deceives the public.
    - Statements made by engineers should not include any major omissions of fact or any material distortion of fact.
    - Experts may post advertisements for the recruitment of new staff members.
    - It is acceptable for experts to contribute to both the general and technical media, so long as they do not plagiarise the work of anyone.
- Experts are obligated to keep private any non-public information pertaining to the commercial or technical operations of any current, or former customer, or entity.
    - Experts who have gained domain expertise on a project should not seek new work linked to that program without obtaining approval from all individuals/entities concerned to do so in order to prevent conflicts of interest.
    - It is against the rules for an engineer to use the knowledge gained from previous clients or employers in a conflicting interest scenario without the consent of management involved.
- Engineers shall not attempt to obtain employment, or advancement, or professional engagements by untruthfully criticising other engineers, or by other improper, or questionable methods.
    - Experts are not allowed to use the company's resources for personal use without prior approval.
    - Professionals are prohibited from asking, or offering incentives that might compromise their independence of judgement.
    - Professionals on payroll may take on extra work outside of regular jobs if that does not go against company policy or compromise professional integrity.
- Engineers shall not attempt to injure, maliciously, or falsely, directly, or indirectly, the professional reputation, prospects, practice, or employment of other engineers. Engineers who believe others are guilty of unethical, or illegal practice shall present such information to the proper authority for action.
    - No practising engineer may review the work of a customer who has retained the services of several engineers without the prior written approval of each of those engineers or until that engineer's engagement in the assignment has been terminated.
    - Engineers in government, business, and academia all have the freedom to critique the findings of other researchers.
    - It is acceptable for sales and manufacturing professionals to make objective scientific analyses of products from different makers.
- Engineers shall accept personal responsibility for their professional activities, provided, however, that engineers may seek indemnification for services arising out of their practice for other than gross negligence, where the engineers' interests cannot otherwise be protected.
    - Engineers shall conform to state registration laws in the practice of engineering.
    - Engineers shall not use association with a non-engineer, a corporation, or a partnership as a cloak for unethical acts.
- Engineers shall give credit for engineering work to those to whom credit is due and will recognise the proprietary interests of others.
    - In all cases when it is possible to do so, experts should credit the individuals who made significant contributions to a project's end outcome.
    - The expert's ideas, data, and records are the property of the company.
    - Experts have to acknowledge the designs that have been supplied by their customer/client and they cannot use them in any other programme without the customer's permission.

- Experts should enhance their skills throughout their entire careers and attend conferences and seminars related to their field.
- Before commencing work for another party, an engineer ought to have a specific legal contract in place on any changes, drawings, breakthroughs, or other materials that may establish trademarks.

FEANI Position Paper on Code of Conduct: Ethics and Conduct of Professional Engineers

Ethical Principle

The decisions and actions of engineers have a large impact on the environment and society. The engineering profession thus has an obligation to ensure that it works in the public interest and with regard to health, safety, and sustainability.

Framework Statement

The aforesaid ethical ideal is reflected in the standards of conduct established by national organisations of engineers and by FEANI in regards to EUR ING registrants. This harmony has allowed the technical community in Europe to adopt a unified stand on the ethical behaviour of its members. An engineer's duty is to do their task honestly, in the public's best interest, and with the highest level of expertise and care, they can muster. To this end, engineers have to perform the following.

- Shall maintain their relevant competencies at the necessary level and only undertake tasks for which they are competent
- Shall not misrepresent their educational qualifications or professional titles
- Shall provide impartial analysis and judgement to employer or clients, avoid conflicts of interest and observe proper duties of confidentiality
- Shall carry out their tasks to prevent avoidable danger to health and safety and prevent avoidable adverse impact on the environment
- Shall accept appropriate responsibility for their work and that carried out under their supervision
- Shall respect the personal rights of people with whom they work and the legal and cultural values of the societies in which they carry out assignments
- Shall be prepared to contribute to the public debate on matters of technical understanding in fields in which they are competent to comment

Practice Exercise

1. The purpose of introducing ethics to engineering professionals is to ensure:
I. ethically literate behaviour
II. ethically challenged behaviour
III. ethically appropriate decision-making skills
IV. character building
Select the correct answer from the codes:
(A) All of the above
(B) I, II, and III only
(C) I, III, and IV only
(D) I and IV only

2. Being ethically literate implies:
I. an ability to comprehend complex ethical issues
II. an ability to understand the consequences of one's action
III. an improved ability to comprehend relationships
IV. an improved ability to be far-sighted
Select the correct answer from the codes:
(A) I and II only
(B) I, II, and III only
(C) I, III, and IV only
(D) II, III, and IV only

3. Which of the following statements is/are correct?
I. Personal morality is supposed to take precedence over professional ethics.
II. Professional ethics have precedence over personal morality.
III. Professional ethics is beyond the view that the public holds.
IV. An improved ability to be far-sighted.
Select the correct answer using the codes given below:
(A) I and II only
(B) II only
(C) II and III only
(D) I, II, and III

4. Which of the following statements is correct?
(A) An ethical engineer tries to avoid the risk but does not publicise them.
(B) An ethical engineer publicises the risks rather than spending too much on avoiding risks.
(C) An ethical engineer places high value on avoiding risks and on publicising those risks that are worth taking.
(D) An ethical engineer has nothing to do with publications of risks.

5. What is the meaning of morality?
(A) The right and wrong course of action for an individual
(B) The right and wrong course of action for an individual or a community
(C) Making the right decision where there is a chance to do wrong
(D) Defines personal traits which make a person moral

6. Key values of the engineering profession include which of the following?
(A) Safety, human community, human progress, clean and clear decision-making, a partnership of firm
(B) Safety of personal interest, human community, human progress, clean and clear decision making, partnership with nature
(C) Safety, human community, human progress, clean decision making, partnership with nature
(D) Safety, human community, human progress, clean and clear atmosphere, partnership with nature

7. Which of the following statements is/are correct about industrial safety integration?
(A) It is an integration of hardware and software solutions.
(B) It is an integration of a mechanical system with a software solution.
(C) It is an integration of training services and software solutions to meet the requirement of industrial safety.
(D) Both (A) and (B).

8. Ethical absolutism/cognitivism is
(A) global, strict and absolute rules on right and wrong
(B) claiming that morality is context-dependent and subjective; there are no universal rights and wrongs that can be rationally determined
(C) right and wrong are objective and determined by the culture of the organisation
(D) claiming that there are eternal, universally applicable moral principles

9. Which of the following statements is/are correct?
I. The best way to create trust is to act with trustworthiness.
II. Trustworthiness means acting in a way to engender trust and merit the confidence of others.
III. Trustfulness is expressing a sense of confidence in others.
Select the correct answer using the codes given below:
(A) I and II only
(B) II and III only
(C) I and III only
(D) I, II, and III

10. Which of the following statements is/are correct?
(A) Integrity is the unity of character and unity is consistency among our attitudes, emotions, and conduct in relation to justified moral values.
(B) Integrity is practicing what one preaches.
(C) Sensitivity to the need of others is integrity.
(D) All of the above

11. Which of the following statement is correct?
(A) Greater the average harm, the greater the company's obligation to avoid risk.
(B) Greater the total harm, the greater the company's obligation to avoid risk.
(C) Greater the average and total harm, the greater the company's obligation to avoid or publicise the risk.
(D) Risk irrespective of impact, need only be avoided and no need to publicize it.

12. Consider the following statements.
I. Any decision in value conflict requires the values of one party to be sacrificed.
II. Value conflict involving value issues is also termed an ethical dilemma and crisis of conscience.
III. A constraint is an engineering decision that has been selected to be imposed as a requirement.
Which of the above statement(s) is/are correct?
(A) I only
(B) I and II only
(C) III only
(D) I, II, and III

13. Which of the following statements is/are correct?
(A) Whistle blowing is disobedience by protest.
(B) Disobedience by protest is a state higher than disobedience by non-participation and is reached when an engineer thinks that merely non-participation in objectionable activity is insufficient.
(C) Whistle blowing is done through approved channels.
(D) Both (A) and (B)

14. Which of the following statements is/are correct?
(A) As human beings, engineers have fundamental rights to live and freely pursue their legitimate personal interests.
(B) Engineers have the human right of not to be discriminated against in employment on basis of sex, race, or age.
(C) Engineers have several moral rights which are overlapping with rights of human, employee, contractual, and professional rights.
(D) All of the above

15. Consider the following statements:
I. positive face of engineering ethics has taken second place to the negative face in most engineering ethics codes.
II. promoting the welfare of the public is a positive face of engineering ethics.

III. one limitation of engineering ethics is the absence of a motivational dimension.

Which of the above statements are correct?

(A) I and II only
(B) II and III only
(C) I and III only
(D) I, II, and III

16. Ethical competencies a public service engineer must display are

I. respect for privileged information
II. respect for service privileges and perks
III. refusing to perform anything unethical
IV. taking responsibility for one's behaviour

Select the correct answer from the following codes:

(A) All of the above
(B) I, II, and III only
(C) I, III, and IV only
(D) II, III, and IV only

17. A public service engineer, along with having a personal sense of right and wrong, must also be aware of

I. legislative laws
II. judicial decisions
III. administrative laws
IV. social laws

Select the correct answer from the following codes:

(A) All of the above
(B) I, II, and III only
(C) I, III, and IV only
(D) I, II, and IV only

18. Which of the following are not fundamental canons of engineering ethics?

I. Engineers shall perform services only in the areas of their competence.
II. Engineers shall have to compete with others to build their reputation by providing the best services.
III. Engineers do not have any obligation to the professional development of those engineers who are working under their supervision.

Select the correct answer using the given codes.

(A) I and II only
(B) II and III only
(C) I and III only
(D) I, II, and III

19. Consider the following statements:

I. morality is more general and prescriptive based on customs and traditions
II. ethics is specific and descriptive based on critical reflection on morals
III. as against morals and ethics, laws are normal formally approved by the state

Which of the above statements are correct?

(A) I and II only
(B) II and III only
(C) I and III only
(D) I, II, and III

20. The incomplete disclosure of the revenue recognition policy of any company comes under which of the followings?

(A) Lack of humility
(B) Lack of accuracy
(C) Lack of integrity
(D) Lack of transparency

21. Ethical problems in engineering are

(A) susceptible to formulaic answers
(B) least susceptible to formulaic answers
(C) sometimes susceptible to formulaic answers
(D) none of the above

22. Which of the following statements is incorrect?

(A) Personal morality is the set of moral beliefs that a person holds.
(B) Professional ethics is beyond the view that the public holds.
(C) Personal morality includes all the personal rights and wrongs people choose to believe.
(D) Personal morality is supposed to take precedence over professional ethics.

23. Ethically, which question should an engineer ask themselves when thinking of publicising a risk?

(A) Will the political parties be upset with the disclosure?

(B) How much will the company pay me, if I do not disclose the risk?
(C) How much will the company be hurt by publicising the risk?
(D) Will my life be in danger if the disclosure is blown out of proportion?

24. Which of the following pairs are correctly matched?
I. Moral Responsibility: responsibility that is based on one's role as professional
II. Professional Responsibility: responsibility that is based on moral obligations
III. Role Responsibility: responsibility that is based on the role one has or plays in a certain situation
IV. Responsibility: linked to the role one has in a particular situation
Select the correct answer from the following codes.
(A) All of the above
(B) I and II only
(C) III and IV only
(D) None of the above

25. Active responsibility refers to
(A) responsibility before something has happened
(B) responsibility after something has happened
(C) responsibility as the action is taking place
(D) coming forward and actively taking responsibility

26. What are the components of attitudes?
(A) Cognitive and affective
(B) Affective and social
(C) Social and behavioural
(D) Affective, behavioural, and cognitive

27. Consider the following statements:
I. whistle blowing is not obligatory, and one may opt just not to participate in any unethical is happening, say in any manufacturing plant.
II. as per the Public Interest Disclosure and Protection of Informers (PIDPI) Resolution, the Central Vigilance Commission does not reveal the identity of the complainant.
Which of the above statements is/are correct?
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

28. Authority is seen as a legitimate right of a person:
(A) to carry out actions and direct others
(B) to influence others
(C) to make decisions
(D) all of the above

29. Consider the following statements:
I. values are the scales to weigh one's course of action under a given circumstance
II. values are well-defined, and they do not change
III. all values do not have the same weight or priority
Which of the above statements are correct?
(A) I and II only
(B) II and III only
(C) I and III only
(D) I, II, and III

30. Whistleblowing is:
(A) exposure of abuses for personal interests
(B) exposure of abuses for protecting the public interest
(C) exposure of abuses for organisational gains
(D) exposure of abuses as an act of vengeance

31. Which of the following can be the reasons for people to behave unethically?
I. Pressure from the higher authority to complete the project in less time
II. Involvement in nepotism
III. Over-powered in authority
IV. Lack of promotion or career development policies
Select the correct answer using the codes given below:
(A) I, II, and IV
(B) II, III, and IV
(C) I, III, and IV
(D) I, II, III, and IV

32. An engineer is a professional because of:
I. specialised skills
II. autonomy of practice
III. monopoly or a near-monopoly of a particular skill
Select the correct answer from the codes:
(A) I only
(B) II only
(C) III only
(D) All of the above

33. Which of the following statements hold true about ethics?
I. Normative ethics concern the practical means of determining a moral course of action.
II. Meta-ethics deals with the nature of the moral judgment.
Select the correct answer using the codes given below.
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

34. In exercising moral autonomy, what should be the right course of action if controversy erupts between engineers and workers?
(A) Engineers have more autonomy and authority than workers so their decision should prevail.
(B) Workers are directly associated with the job given so their decision should prevail.
(C) Both parties should show some tolerance and arrive at a consensus.
(D) The same job should be given to both of them and then compare the outcome.

35. Trademarks cannot:
(A) be represented graphically
(B) include shapes of goods or a combination of colors
(C) be capable of distinguishing the goods or services of one person from others
(D) be a deceptive mark

36. Engineering as a profession is dedicated to one of the following values.
I. Safety
II. Human progress
III. Clean, clear decision-making
IV. Community
V. Partnership with nature
Select the correct answer using the codes given below:
(A) I, II, III, and V
(B) I, III, IV, and V
(C) II, IV, and V
(D) I, II, III, IV, and V

37. Which of the following is not a form of conflict of interest?
(A) Moonlighting
(B) Insider information
(C) Authority
(D) Interest in other companies

38. Which of the following is not dimension integrity?
(A) Consistency
(B) Taking responsibility
(C) Being insular in approach
(D) Being holistic in approach

39. Which of the following is not a quality of a professional engineer?
(A) Integrity
(B) Impartiality
(C) Competence
(D) Professional growth

40. Professionally engineers are responsible for:
I. their actions
II. duties accepted and implicit in their work and institutions
III. legal obligations imposed by contract
IV. greater moral consequences of their actions
Select the correct answer from the given codes.
(A) All of the above
(B) I and IV only
(C) I, II, and IV only
(D) I, II, and III only

41. Which one of the following statements is not correct?
(A) Confidentiality simply means not sharing client information.

(B) A whistle-blower is a person who reveals any policy of an organisation to the public.
(C) Trust has the common element of belief, mutuality, and predictability.
(D) The moral values held by an individual are enduring or lasting beliefs.

42. Which of the following are correct in the case of environmental ethics?
I. Respect natural resources, flora, and fauna
II. Quick decision in matters related to the environment
III. Obligation to not harm the environment
IV. Quality of producing effectively with minimum waste of resources
Select the correct answer using the codes given below:
(A) I, II, and III
(B) I, III, and IV
(C) II, III, and IV
(D) I, II, III, and IV

43. Which of the following types of inquiry is based on values?
(A) Normative inquiry
(B) Conceptual inquiry
(C) Descriptive inquiry
(D) All of the above

44. Consider the following statements regarding loyalty.
I. Loyalty to companies or their owner should not be equated with merely obeying one's immediate supervisor.
II. An engineer might have a professional obligation to both an employer and to the public that reinforces rather than contradict each other.
Which of the above statements is/are correct?
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

45. Which of the following statement is correct?
(A) The main branches of ethics are applied ethics, normative ethics, meta-ethics, and descriptive ethics.
(B) Morality does not fall under any branch of ethics,
(C) Study of ethics in India is a new subject.
(D) All of the above

46. A person with sound moral character is said to possess integrity. When applied to an organisation, integrity refers to an environment in which:
I. self-serving interest exists
II. fairness exists
III. honesty abounds
IV. virtues and skills are balanced
Select the correct answer from the given codes:
(A) All of the above
(B) II and III only
(C) I, III, and IV only
(D) II, III, and IV only

47. Which of the following is not a moral value?
(A) Honesty
(B) Fairness
(C) Respect
(D) None of these

48. Theoretically, which of the following is not a form of dishonesty?
(A) Lying
(B) Deliberate Deception
(C) Withholding Information
(D) Corruption

49. Which of the following is not a mandatory criterion required for a profession?
(A) Knowledge
(B) Organisation
(C) Public good
(D) Leadership quality

50. Which of the following can be referred to as the bridge between responsibility in private and professional life?

(A) Integrity
(B) Compromise
(C) Morality
(D) Collegiality

51. Consider the following statements regarding the ethical code for engineers:
I. Engineers shall respect the proprietary information and intellectual property rights of others.
II. Engineers shall associate only with honest persons or organisations.
III. Engineers shall hold paramount safety, health, and welfare of the public in the performance of their professional duties.
Which of the above statements are correct?
(A) I and II only
(B) II and III only
(C) I and III only
(D) I, II, and III

52. Which of the following are not the general features of morally responsible engineers?
(A) Accountability
(B) Autonomy
(C) Comprehensive perspective
(D) Collegiality

53. Regarding limitations of ethical code, consider the following statements.
I. Codes cannot give a solution or method for solving internal conflicts.
II. Codes can be reproduced in a very rapid manner.
Which of the above statements is/are correct?
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

54. Which of the following categories of risk can be ignored?
(A) Low consequence, low probability
(B) Low consequence, high probability
(C) High consequence, low probability
(D) High consequence, high probability

55. Which of the following is/are reasons for conflict of interests?
(A) Insider trading
(B) Kickbacks
(C) Bribe
(D) All of the above

56. Which of the following agreement is enforceable by law?
(A) Illegal agreement
(B) Void agreement
(C) Valid agreement
(D) Enforceable agreement

57. Consider the following statements regarding ways to promote an ethical climate.
I. The management has to establish some procedures for resolving conflicts.
II. The bottom-level management must establish a moral tone in words, in policies, by personal examples, etc.
Which of the above statements is/are correct?
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

58. Which of the following is not a condition to meet for whistle blowing?
(A) Need
(B) Capability
(C) Plagiarism
(D) Last resort

59. Consider the following statements:
I. employees must see some of their own important goals are met by and through a group in which they participate.
II. employees must be treated fairly, each receiving his or her share of benefits and burdens.
Which of the above statements is/are correct?
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

60. Which activity by a professional engineer would be considered unethical?
(A) Not charging a fee for presenting a design

(B) Reviewing the work of another professional without his consent
(C) Providing professional service as a consultant
(D) Signing plan with a thorough review

61. What is ethics in engineering profession?
(A) The study of business situations arising, and decisions are taken by engineering professionals, where issues of right, or wrong are addressed.
(B) Decisions what engineering professionals make on issues that could be considered right, or wrong.
(C) Ethics that can be applied as per law.
(D) Ethical processes used to achieve a good ethical standard.

62. As per the theory of virtue ethics:
(A) an action is right if it supports good character traits (i.e., virtues)
(B) an action is wrong if it supports bad character traits (i.e., vices)
(C) personnel character is defined vices and virtues of an individual
(D) All of the above

63. With reference to types of risk, consider the following statements.
I. In personal risk, an individual who is given sufficient information, will be in a position to decide whether to take part in a risky activity or not.
II. Public risks are generally involuntary.
Which of the above statements is/are correct?
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

64. Consider the following statements regarding whistle blowing.
I. Whistle blowing is morally permitted when one does not get satisfied with their immediate supervisors and exhausts the channels available within the organisation.
II. It is morally obligated when there must be strong evidence that making the information public will prevent the threatened serious harm.
Which of the above statements is/are correct?
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

65. Which of the following is/are central elements of collegiality?
(A) Cooperation
(B) Respect
(B) Commitment
(D) All of the above

66. Statement I: Risk-Benefit Analysis helps in deciding which design has greater advantages.
Statement II: It assists the engineers to identify a particular design that is more feasible to implement.
(A) Statement I and II both are individually true, and Statement II is the correct explanation of Statement I.
(B) Statement I and II both are individually true, but Statement II is not the correct explanation of Statement I.
(C) Statement I is true, but Statement II is false.
(D) Statement I is false, but Statement II is true.

67. With reference to drawbacks of utilitarianism, consider the following statements.
I. Sometimes, what is best for the community as a whole is bad for certain individuals in the community.
II. It is often impossible to know in advance which decision will lead to the best.
Which of the above statements is/are correct?
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

68. Consider the following factors that may affect acceptability.

I. Voluntarism and control
II. Job-related pressures
III. Effect of information on risk assessment

Which of the above factors are correct?
(A) II and II only
(B) II and III only
(C) I and III only
(D) I, II, and III

69. Which of the following are the essential elements of Intellectual Property Rights (IPR)?

I. Patents
II. Copyrights
III. Trademarks
IV. Trade secrets

Select the correct answer using the codes given below.
(A) I, II, and III
(B) II, III, and IV
(C) I, III, and IV
(D) I, II, III, and IV

70. Which of the following steps are essentially a part of solving an ethical problem?

I. Recognising a problem
II. Generating alternative solutions
III. Evaluating benefits and costs of an alternate solution
IV. Decision-making and optimisation

Select the correct answer using the codes given below
(A) I, II, and III
(B) II, III, and IV
(C) I, III, and IV
(D) I, II, III, and IV

71. Consider the following statements regarding the ethical codes of engineers.

I. Engineers shall act for each employer or client as faithful agents or trustees.
II. Engineers shall avoid deceptive acts.

Which of the above statements is/are correct?
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

72. Which of the following does not play a role in determining the extent of a risk?
(A) Probability of a danger
(B) Cause of the danger
(C) Severity of the danger
(D) Extent of the danger

73. Which of the following are not the key factors in assessing acceptable risks?
(A) Is the risk voluntarily taken?
(B) Do those at risk know the potential risks?
(C) Do those at risk reap the benefits of the risk?
(D) Is the risk taken under pressure?

74. Which of the following conditions do not apply when deciding upon blameworthiness?
(A) Wrongdoing
(B) Causal contribution
(C) Foreseeability
(D) None of the above

75. With reference to whistle blowing, consider the following statements.

I. The act of whistleblowing can cause conflicts of interest between personal, organisational, and societal spheres.
II. Whistle blowing can be permitted if the harm that will be done by the product is serious and considerable.

Which of the above statements is/are correct?
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

76. Which one of the following codes can be referred to as a document which consists of all ethical standards that an employer expects from employees?
(A) Distributive code
(B) Ethical code
(C) Procedural code
(D) Descriptive code

77. Which one of the following can be a reason for unethical behaviour?
(A) Pressure from higher management to achieve goals
(B) A system of checks and balances
(C) Customers and workers' satisfaction
(D) Evaluation of results

78. Which one of the following factors primarily deals with business ethics?
(A) Unfair competition
(B) Moral obligation
(C) Moonlighting
(D) Pricing of products and services

79. Which one of the following original works is safeguarding copyright upon creation?
(A) Standard calendars
(B) Paintings
(C) Clothing design
(D) Names or titles

80. Which one of the following can be referred to as the codes of behaviours and courtesy?
(A) Altruism
(B) Law
(C) Etiquette
(D) Morals

81. Which of the confidentially and privacy is/are correct?
I. Confidentiality is a right while privacy is an agreement between two individuals.
II. Privacy is connected to autonomy while confidentiality is connected to secrecy.
Select the correct answer using the codes given below.
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

82. Consider the following statements.
I. Meta-ethics talks about the nature of ethics and moral reasoning.
II. Normative ethics involves the evaluation of moral standards.
III. Descriptive ethics describes how people behave and what sorts of normal standards they claim to follow.
Which of the above statements is/are correct?
(A) I only
(B) II and III only
(C) I and III only
(D) I, II, and III

83. Define morality:
(A) what is considered as correct within a society
(B) making the right decisions, where there is a chance to do wrong
(C) defining what is right and wrong for an individual or a community
(D) where individuals have a conscious choice to make a right and ethical decision

84. What are ethical theories?
(A) Ethical theories are conduct that should be followed to have good ethical practice.
(B) Ethical theories are the rules and principles that determine right and wrong for any given situation.
(C) Ethical theories are ancient hypotheses' on how to create good business practices.
(D) Ethical theories give guidelines on how to achieve a good corporate image.

85. What are the virtues given by Plato?
(A) Confidence, motivation, self-control, and courage
(B) Happiness, goodness, love, and justice
(C) Wisdom, courage, self-control, and justice
(D) Wisdom, confidence, happiness, and justice

86. The two components of passive responsibility are:
(A) role and responsibility
(B) accountability and blameworthiness
(C) role and blameworthiness
(D) accountability and role

87. Which of the following types of power are normally used by managers?

(A) Reward power, coercive power, referent power

(B) Coercive power, political power, expert power

(C) Reward power, expert power, political power

(D) Coercive power, media power, referent power

88. With reference to the profession, which of the following statement is correct?

(A) The result is important in a profession, not means.

(B) Morally praiseworthy goals may be pursued by professionals, by morally permissible means.

(C) A professional should be worried about organisational good only, not the public good.

(D) There is no public concern in the engineering profession.

89. Consider the following statements.

I. Empathy is feeling the emotions of others.

II. Compassion is feeling the emotions with a desire to help.

Which of the above statements is/are correct?

(A) I only

(B) II only

(C) Both I and I

(D) Neither I nor II

90. Which of the following is not usually the objective of a code of ethics?

(A) To improve the public image of the company

(B) To create an ethical workplace

(C) To enhance the profits of the business

(D) To evaluate the ethical components of the proposed actions of an employee

91. Which of the following are reasons for the risk-benefit analysis?

I. To know risks and benefits and weigh their magnitude

II. To decide on designs and desirability of a product/project

III. To suggest and modify the design so that the risks can be eliminated

Select the correct answer using the code given below.

(A) I and II only

(B) II and III only

(C) I and III only

(D) I, II, and III

92. Virtue ethics:

(A) assumes good businesses will make good decisions

(B) assumes good governments will enforce good ethical practices in their business

(C) assumes good persons will make good decisions and personal qualities affect decisions

(D) assumes good persons will make good decisions and personal qualities decisions

93. With reference to aspects of honesty, consider the following statements.

I. Truthfulness refers to maintaining integrity and taking responsibility for personal performance.

II. Trustworthiness refers to facing the responsibilities upon telling truth.

Which of the above statements is/are correct?

(A) I only

(B) II only

(C) Both I and II

(D) Neither I nor II

94. Consider the following statements.

I. Professional values in public services are instrumental in establishing personal credibility.

II. Human values in public services are instrumental in establishing professional competence.

Which of the above statements is/are correct?

(A) I only

(B) II only

(C) Both I and II

(D) Neither I nor II

95. Which one of the following is not a professional right of an engineer?

(A) Right to publicize the risks and dangers
(B) Right to refuse to engage in an assigned professional activity
(C) Right to express one's professional judgment including the right to dissent
(D) Right to have remuneration for professional services

96. Statement I: A risk is acceptable when those affected are generally no longer apprehensive about it.

Statement II: Doubtfulness depends on how people take the risk or perceive it.

(A) Statement I and II both are individually true, and Statement II is the correct explanation of Statement I.
(B) Statement I and II both are individually true, but Statement II is not the correct explanation of Statement I.
(C) Statement I is true, but Statement II is false.
(D) Statement I is false, but Statement II is true.

97. Statement I: Professionalism involves being honest about level and areas of competence, and never agreeing to work in areas in which a person is not competent or not able to easily achieve competency.

Statement II: An engineer employing their generalist skills within their area of expertise can make a significant and positive contribution to society.

(A) Statement I and II both are individually true, and Statement II is the correct explanation of Statement I.
(B) Statement I and II both are individually true, but statement II is not the correct explanation of Statement I.
(C) Statement I is true, but Statement II is false.
(D) Statement I is false, but Statement II is true.

98. Statement I: Conflicts, where values are involved, tend to be contentious.

Statement II: Different people assign different weights to different values.

(A) Statement I and II both are individually true, and Statement II is the correct explanation of Statement I.
(B) Statement I and II both are individually true, but Statement II is not the correct explanation of Statement I.
(C) Statement I is true, but Statement II is false.
(D) Statement I is false, but Statement II is true.

99. Statement I: Gifts are not bribes, as long as they are small gratuities offered in the normal conduct of business.

Statement II: A bribe is a substantial amount of money or goods offered beyond a stated, business contract to get an advantage.

(A) Statement I and II both are individually true, and Statement II is the correct explanation of Statement I.
(B) Statement I and II both are individually true, but Statement II is not the correct explanation of Statement I.
(C) Statement I is true, but Statement II is false.
(D) Statement I is false, but Statement II is true.

100. Consider the following statements.

I. Perseverance builds character and is defined as a persistent, determined, and constant approach toward an issue.
II. Truthfulness and trustworthiness are two aspects of honesty. Which of the above statements is/are correct?

(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

101. Consider the following statements.

I. Cost-benefit analysis shares many similarities with utilitarianism, but the cost-benefit analysis is not an ethical analysis tool.
II. When looking at an ethical problem, the first step should be to determine what

the right course of action is and then steps in financial cost.

Which of the above statements is/are correct?

(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

102. Consider the following statements regarding honesty.

I. Honesty has two aspects i.e., truthfulness and trustworthiness.
II. The two aspects of honesty are interwoven with each other.
III. Discretion is sensitivity to the legitimate concern of privacy with respect to confidential information.

Which of the above statements are correct?

(A) I and II only
(B) II and III only
(C) I and III only
(D) All of the above

103. Which of the following are usually ethical risks faced by an employee?

(A) Honesty and flexibility
(B) Fairness and compassion
(C) Fairness and responsibility
(D) Compassion and responsibility

104. What is/are the method(s) to avoid conflict of interests?

I. Follow the guidance of the department policy
II. Seeking guidance from college seniors on the issue
III. Examine the motives behind a view taken

Select the correct answer using the codes given below.

(A) I only
(B) I and II only
(C) I and III only
(D) I, II, and III

105. In general, which of the following five terms are fundamental principles in the code of ethics?

(A) Objectivity, integrity, competence, confidentiality, and professional behaviour
(B) Security, integrity, planning, honesty, and due care
(C) Objectivity, security, integrity, honesty, and professional behaviour
(D) Honesty, planning, competence, confidentially, and due care

106. Consider the following statements.

I. Engineers are supposed to design a product with the best efficiency.
II. In designing a product with the best efficiency, engineers need not bother about the impact on the environment.

Which of the above statements is/are correct?

(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

107. Consider the following statements regarding moral courage.

I. Moral courage is a virtue and needs to be determined when action is required.
II. It means doing the right thing even at the risk of inconvenience, punishment, ridicule, loss of job or security, or social status, etc.

Which of the above statements is/are correct?

(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

108. Which of the following is/are the senses of engineering ethics?

(A) Particular set of beliefs, attitudes, and habits
(B) Morally correct
(C) Ethical problems, issues, and controversies
(D) All of the above

Answer Key

1. (C)	**2.** (A)	**3.** (C)	**4.** (C)	**5.** (B)	**6.** (C)	**7.** (C)	**8.** (D)	**9.** (B)	**10.** (D)

Practice Exercise

1. Consider the following statements regarding the definition of 'moral'.

I. Being or acting in accordance with standards and precepts of goodness
II. Arising from conscience or a sense of right and wrong
III. A concisely expressed precept or general truth, a maxim
IV. The principles of conduct governing an individual or a profession, standards of behaviour

Which of the above statements are correct?
(A) I, II, III, and IV
(B) I, II, and IV only
(C) III and IV only
(D) I, II, and III only

2. Which is/are the levels of study of ethics?

I. At the level of individual
II. At the level of engineering
III. At the level of government
IV. At the level of society

(A) Only I, II, and III
(B) Only II, III, and IV
(C) Only I, II, and IV
(D) All of the above

3. Which of the following does not constitute the foundation of ethics?
(A) Honesty
(B) Justice
(C) Integrity
(D) Courtesy

4. What refers to situations in which moral reasons come into conflict, or in which the application of moral values is problematic?
(A) Silo mentality
(B) Preventive ethics
(C) Ethical issues
(D) Moral dilemmas

5. Ethics is synonymous with:
(A) morality
(B) money
(C) standards
(D) conduct

6. The general and abstract concepts of right and wrong behaviour culled from philosophy, theology, and professional societies:
(A) ethics
(B) morals
(C) etiquette
(D) law

7. The ethical dilemma of choosing between two rights refers to:
(A) choosing between the lesser of two evils
(B) deciding which of two employee rights is the most important
(C) deciding to offer a bribe or lose out on an important opportunity
(D) choosing between the two harassment or losing out on two types of sexual

8. The cultural, organisational, community, interpersonal, or personal dynamics that should be considered when making ethical and professional issues are referred to as:
(A) personal considerations
(B) contextual considerations
(C) environmental considerations
(D) ethical considerations

9. Which of the following parameters are evaluated in the definition of 'Moral Agents'?
(A) Whose actions and intentions can be morally evaluated
(B) Whose personal character can be morally evaluated
(C) Both of the above
(D) None of the above

10. In 'Normative Enquiry': norms are to be an identity for which of the following reasons?
(A) What is the reason behind work conflict?
(B) Which is the most desirable stand behaviour?

(C) What are the errors which result in unintended failures?
(D) What is the best principle in work ethics?

11. Ethics is needed for a practicing engineer because:
(A) every decision engineer makes is not settled by rules
(B) organisations function best when the values implicit in the rules are widely known by all
(C) engineers who understand the ethical climate of the organisation can contribute to social interest better
(D) all of these

12. The capacity to recognise situations and circumstances that have implications for the welfare or well-being of another is referred to as:
(A) relational dimension
(B) ethical sensitivity
(C) spirituality
(D) multicultural dimension

13. Which of the following terms refers to the ideals, beliefs, norms, and ethos that arouse an emotional response for or against them in a given community?
(A) Personal ethics
(B) Ethical climate love
(C) Organisational ethics
(D) Community values

14. Which of the following statements is/are correct?
(A) Legal rights are the entitlements and permissions given by the law.
(B) Moral rights are not a matter of law but ethics generally apply to everyone equally.
(C) All the moral rights may not be legal rights.
(D) All of the above.

15. Which is true regarding virtue ethics?
(A) It is ethical if the act is good.
(B) It is ethical if the consequence of the act is good.
(C) It is ethical if the character of the agent is good.
(D) None of these.

16. Legal rights are:
(A) the system of rules established by authority, society, or custom
(B) the lack of clarity as to whether a particular act violates a law, rule, or policy
(C) the 'just claims' given to all humans within a government jurisdiction
(D) the act of informing authorities of harmful, dangerous, or illegal activities

17. A moral theory that seeks to create the best for the most people:
(A) whistle blowing
(B) utilitarianism
(C) morals
(D) rights analysis

18. The accepted standards of right and wrong that are usually applied to personal behaviour:
(A) morals
(B) law
(C) etiquette
(D) ethics

19. If you believe in making decisions for the good of most people. You can be described as which school of thought?
(A) Utilitarianism
(B) Teleology
(C) Deontology
(D) Egoism

20. Which statement is/is true?
(A) Ethics is not synonymous with religious morality or moral theology.
(B) Ethics is the principle that guides the human behaviour.
(C) The terms 'ethics' and morality are not synonymous.
(D) All of the above.

21. A teleological approach to business ethics proposes that the guiding principle should be
(A) Practice
(B) People
(C) Purpose
(D) Power

22. The form of ethics which reflects an individual's internal sense of how he should live, what he should strive for, and serves as the basis for moral decisions, or judgments and guiding behaviour is referred to as:
(A) ethical virtues
(B) ethical values
(C) personal ethics
(D) ethical principles

23. The ethical theory which considers the intention of the person choosing, the means, and the nature of the act itself is:
(A) rights ethics
(B) care ethics
(C) consequentialism
(D) duty ethics

24. Which of the following terms refers to the way a professional put into practice the choices made about what is valuable in his or her profession?
(A) Values theory
(B) Decision-making strategy
(C) Perspective theory
(D) Ethical theory

25. Which of the following ethical theories aims at realising the best consequences, and is future-oriented and endeavors to achieve the best possible outcomes?
(A) Narrative ethics
(B) Care ethics
(C) Duty ethics
(D) Consequentialist ethics

26. Which of the following is a major strength of the duty ethics perspective?
(A) It stresses the relational and emotional aspects of an individual's life.
(B) It respects the values of the individual and recognises the complexity of moral situations, motives, means and ends, and the nature of the act itself.
(C) It is person-centred, rather than rule-centred.
(D) It recognises experience among individuals and situations.

27. Which of the following refers to the reasoning process by which human behaviours, institutions, or policies are judged to be in accordance or not with moral standards?
(A) Moral reasoning
(B) Moral duty
(C) Moral justice
(D) None of the above

28. If you believe in making decisions for the good of most people, you can be described as which school of thought?
(A) Moral principles
(B) Human rights
(C) Consequentialism
(D) Individualism

29. In making a moral decision, one should be more concerned with arriving at good consequences than worrying about having good motives.
(A) Ethical Relativism
(B) Virtue Ethics
(C) Utilitarianism
(D) Deontology

30. In making a moral decision, one should be more concerned with having good motives than arriving at good consequences.
(A) Ethical Relativism
(B) Virtue Ethics
(C) Utilitarianism
(D) Deontology

31. One should be more concerned with what one does than with what kind of person one becomes.
(A) Ethical Relativism
(B) Virtue Ethics
(C) Utilitarianism
(D) Deontology

32. The only way to make sure one acts in a morally good way is to look around to see what most other people are doing and act as they do.
(A) Ethical Relativism
(B) Virtue Ethics
(C) Utilitarianism
(D) Deontology

33. To ensure that one is a moral person, the right action must come from habit.
(A) Ethical Relativism
(B) Virtue Ethics
(C) Unitarianism
(D) Deontology

34. Ethics boils down to a cost-benefit analysis.
(A) Ethical Relativism
(B) Virtue Ethics
(C) Utilitarianism
(D) Deontology

35. One should only perform actions whose maxims can be universalised.
(A) Ethical Relativism
(B) Virtue Ethics
(C) Utilitarianism
(D) Deontology

36. One should only perform actions that promote societal happiness.
(A) Ethical Relativism
(B) Virtue Ethics
(C) Utilitarianism
(D) Deontology

37. One should never lie, even to save the life of a loved one.
(A) Ethical Relativism
(B) Virtue Ethics
(C) Utilitarianism
(D) Deontology

38. Which ethical theory is least capable of prescribing what actions one should take to become a moral person?
(A) Ethical Relativism
(B) Virtue Ethics
(C) Utilitarianism
(D) Deontology

39. Which ethical theory could allow an innocent person to be executed if the execution would benefit society?
(A) Ethical Relativism
(B) Virtue Ethics
(C) Utilitarianism
(D) Deontology

40. Which ethical theory was supported by Immanuel Kant?
(A) Ethical Relativism
(B) Virtue Ethics
(C) Utilitarianism
(D) Deontology

41. Which ethical theory was supported by Jeremy Bentham?
(A) Ethical Relativism
(B) Virtue Ethics
(C) Utilitarianism
(D) Deontology

42. Deontological theories define right action in terms of:
(A) their consequences
(B) moral rules
(C) the virtuous agent
(D) god's will

43. Which of the following best describes the relationship between utilitarianism and consequentialism?
(A) Utilitarianism is a form of consequentialism.
(B) Consequentialism is a form of utilitarianism.
(C) Utilitarianism and consequentialism are completely independent theories.
(D) Utilitarianism and consequentialism are inconsistent.

44. What is necessary to gain moral knowledge, according to most utilitarians?
(A) Having a virtuous disposition
(B) Accurately predicting the consequences of an action
(C) Making a careful study of moral philosophy
(D) Most utilitarians deny the existence of moral knowledge

45. Which of the following do most utilitarians believe determines the morality of actions?
(A) The expected consequences of the action
(B) The actual consequences of the action
(C) The goodness of the intentions of the person acting
(D) Whether the action violates God's commands

46. What determines the morality of the intentions of one's actions, according to utilitarianism?
(A) The expected consequences of the action
(B) The actual consequences of the action
(C) The emotions felt by the person acting
(D) The sincerity of the person acting

47. What attitudes do most utilitarians take toward moral rules?
(A) Many moral rules are absolute and must never be broken.
(B) Moral rules can be helpful and can be broken if doing so is optimal.
(C) Following moral rules is harmful and ought to be shunned.
(D) Utilitarians believe that the idea of a 'moral rule' is incoherent.

48. The consequentialist approach ignores the importance of _____ and _____ in any ethical judgment.
(A) motive and intention
(B) intention and emotions
(C) emotions and motive
(D) none of the above

49. Which of the following is analogous to the teleological approach?
(A) Deontological theory
(B) Consequential theory
(C) Both of the above
(D) None of the above

50. What is the relationship between rationality and morality?
(A) Morality and rationality are fundamentally opposed.
(B) Rationality requires us to be moral.
(C) Morality and rationality are completely independent.
(D) Rationality might sometimes require immorality but not often.

51. Consider the following factors in making an ethical judgment.
I. The motive from which the action springs.
II. The nature of the act itself, including the means adopted.
III. The resulting consequences.
Which of the above factors are correct?
(A) I and II only
(B) I and III only
(C) I, II, and III
(D) II and III only

52. The codes of behaviour and courtesy are:
(A) etiquette
(B) law
(C) morals
(D) ethics

53. In the context of 'value', which one is relevant?
I. Values mean an in-built mechanism that distinguishes the right from the wrong.
II. Right or wrong should not be interpreted in any absolute metaphysical sense and should be interpreted only in the context of the social environment in which a person lives, moves, and acts.
(A) Both I and II are true.
(B) Only I is relevant and II is devoid of any merits.
(C) Only II are relevant and I is devoid of any merits.
(D) None of the above.

54. Virtue ethics means:
(A) assumes good businesses will make good decisions
(B) assumes good governments will make good ethical practices in their businesses
(C) assumes good persons will make good decisions and personal qualities affect decisions
(D) assumes good persons will make good decisions but it has nothing to do with personal qualities

55. What do the importance of ethical behaviour, integrity, and trust call into question?
(A) The extent to which managers should attempt to change the underlying beliefs and values of individual followers
(B) Who does what
(C) What we do next
(D) All of the above

56. A rule is defined as:
(A) a fundamental belief that usually encompasses several rules
(B) a system of non-statutory, no mandatory rules on personal conduct
(C) an oath was taken by an individual in a ceremony
(D) a guide for conduct and action in a certain situation

57. The Ethical skills are:
(A) care of possessions, modesty, posture, self-reliance, tidy appearance
(B) good behaviour, good manners, good relationships, good environment
(C) attention, calmness, concentration, self-confidence, self-esteem
(D) code of conduct, responsibility, efficiency, perseverance, punctuality

58. What is 'Ethics of Responsibility'?
(A) Moral commitment to one's work and its consequences
(B) Legal commitment to one's work and its consequences
(C) Moral and legal commitment to one's work and its consequences
(D) None of the above

59. What is a 'Grey Area'?
(A) Where law and ethics are clear about the issue
(B) Where there is no clarity
(C) Where there is confusion as to law will give the solution or the ethics
(D) None of the above

60. Handling ethical dilemmas require:
I. Ethical thinking
II. Awareness and development of code of ethics
III. Social and self-awareness
(A) Only I and II
(B) Only I and III
(C) Only II and III
(D) All of the above

61. Engineering ethics applies the general definition of ethics to situations involving:
(A) engineer's social lives
(B) engineer's interpersonal lives
(C) workplace behaviours of engineers
(D) all of the above

62. Which of the following is not an 'inquiry' in engineering ethics?
(A) Normative inquiry
(B) Conceptual inquiry
(C) Decisional inquiry
(D) Factual inquiry

63. Which of the following is a negative notion of engineering ethics?
(A) Aspirational ethics
(B) Preventive ethics
(C) All of the above
(D) None of the above

64. What is the study of the decisions, policies, and values that are morally desirable in engineering practice and research?
(A) Engineering ethics
(B) Engineering management
(C) Engineering system
(D) Engineering integrity

65. What consists of the responsibilities and rights that ought to be endorsed by those engaged in engineering, and of desirable ideals and personal commitments in engineering?
(A) Ethics
(B) Code of ethics
(C) Engineering ethics
(D) Engineering standards

66. 'X' is an ethically centred production engineer so she will ship a product:
(A) only after all its problems have been eliminated
(B) only if the shipping people use packing material that does not harm the environment
(C) only after an ethics committee has approved it
(D) as quickly as she can to meet the customer's schedule

67. What is not the aspect of fairness in the workplace?
(A) People should be straightforward with each other.
(B) People should be impartial.
(C) There should be a community atmosphere in the workplace, where the sights of others are respected.
(D) Use of manipulation to get good work out of the subordinates.

68. Conceiving engineering as a 'social experimentation' means:
(A) there is a need for good engineers for the organisation.
(B) there is a need for good engineers for environmental protection.
(C) good engineers are needed as they should not act in narrow self-interest, but as guardians of public interest, working towards social welfare.
(D) None of the above

69. Which of the following is not a 'Moral Dilemma' faced by engineers?
(A) Problem of vagueness
(B) Problem of conflicting
(C) Problem of disagreement
(D) Problem of resource

70. S1: Engineering ethics is the study of the decisions, policies, and values that are morally desirable in engineering practices.
S2: Engineering ethics consists of the responsibilities and rights that ought to be endorsed by those engaged in engineering.
(A) Only S1 is correct
(B) Only S2 is correct
(C) Both are correct
(D) None are correct

71. S1: The overall goal of preventive ethics is to improve quality by identifying, prioritising, and addressing ethics quality gaps on a systems level.
S2: Preventive ethics does not combine quality improvement techniques with ethical analysis.
(A) Only S1 is correct
(B) Only S2 is correct
(C) Both are correct
(D) None are correct

72. S1: Engineering ethics is not an activity nor a discipline that is aimed at understanding the moral values that ought to guide engineering practice, resolving moral issues in engineering, and justifying moral judgment concerning engineering.
S2: A primary concern of an engineer is the safety of the public that will use the products and devices he designs.
(A) Only S1 is correct
(B) Only S2 correct
(C) Both are correct
(D) None are correct

73. Engineering ethics are needed, because:
(A) they guide the engineers in their role in the organisation.
(B) they make engineers socially conscious of their decisions.
(C) they can increase productivity.
(D) they can improve the image of the organisation.

74. Which one of the following statements is not correct?
(A) Engineering ethics are the set of behavioural standards that all engineers are expected to follow.
(B) Engineers shall perform services only in areas of their competence.
(C) Engineers shall issue public statements only in an objective and truthful manner.
(D) An engineer should be loyal to the organisation even if the organisation is involved in wrongdoing, being loyal to them serves the same goal, the moral good of the employer.

75. Assertion (A): Engineers should know the ethical dimensions of engineering
Reason (R): Engineering rules do not encompass every situation, often the rules only set limits within which decisions must be made.

(A) Both (A) and (R) are individually true, and (R) correctly option (A).
(B) Both (A) and (R) are individually true, but (R) does not explain (A).
(C) (A) is true, (R) is false.
(D) (A) is false, (R) is true.

76. Assertion (A): Most firms and companies like to hire ethically trained engineers.
Reason (R): Ethically trained engineers are more marketable.
(A) Both (A) and (R) are individually true, and (R) correctly option (A).
(B) Both (A) and (R) are individually true, but (R) does not explain (A).
(C) (A) is true, (R) is false.
(D) (A) is false, (R) is true.

77. Select the common values between the public and private sectors.
I. Honesty
II. Commitment
III. Quality and design
IV. Public interest
(A) Only I and II
(B) Only I and III
(C) Only III and IV
(D) All of the above

78. We wish to be good citizens of every community in which we operate. This is a/an:
(A) ethical code
(B) political and social code
(C) legal rule
(D) legal act

79. Consider the following statements regarding profession.
I. People enter into a profession voluntarily.
II. Professionals serve praiseworthy goals by morally permissible means to act in some way as per law, morality, and public opinion.
III. There are some ethical standards that obligate professionals to act in some way as per law, morality, and public opinion.
Which of the above statements are correct?
(A) I and II only
(B) II and III only
(C) I and III only
(D) All of the above

80. Assertion: (A) Many ethical decisions are not made by any individual.
Reason: (R) Legal and company rules determine much of what an engineer may or may not do.
(A) Both (A) and (R) are individually true, and (R) correctly option (A)
(B) Both (A) and (R) are individually true, but (R) does not explain (A).
(C) (A) is true, (R) is false.
(D) (A) is false, (R) is true.

81. Which is/are the key values of engineering as a profession?
(A) Safety
(B) Human progress
(C) Partnership with nature
(D) All of the above

82. Consider the statements.
I. Community is a central value in engineering ethics.
II. Community is a group of persons working out a joint moral vision through a common institution, practices, relationships and shared experiences.
(A) Both I and II are correct
(B) Only II is correct
(C) Only I is correct
(D) None is correct

83. An occupation to become a profession must have:
I. extensive training
II. significant intellectual component of work
III. an important service to the society
IV. room for autonomy in one.
(A) All of the above
(B) Only I, II, and III
(C) Only II, III, and IV
(D) None of the above

84. Out of the following which of the roles, played by an engineer is the best 'model' for the profession?
(A) As a 'saviour' of the society
(B) As a 'bureaucratic servant'
(C) As a 'social servant
(D) As a 'Social enabler and catalyst'

85. What states the moral responsibilities of engineers as seen by the profession, and as represented by a professional society?
(A) Preventive ethics
(B) Aspirational ethics
(C) Code of ethics
(D) Professional code

86. The main purpose of the code of ethics is to:
(A) improve the image of the engineering profession
(B) protect the public
(C) conform to the tradition stablished by other professions
(D) conform to the tradition established by technical societies

87. In between the engineering profession extremes of working solely for the interests of stakeholders and working to solve social problems is the position of being _____.
(A) Professional and social balance
(B) Environmentally sensitive
(C) Professionally committed
(D) Ecologically proactive

88. Consider the following statements.
I. The result is important in a profession, not means.
II. Morally praiseworthy goals may be pursued by professionals, by morally permissible means.
III. A professional should be worried about personal good only, not the public good.
Which of the above statements is/are correct?
(A) I only
(B) II only
(C) I and II only
(D) All of the above

89. Which is the basic principle of ethos for engineering services?
(A) Cooperation is a powerful instrument for team, work, and success in any organisation involving collective work.
(B) Holistic approach indicating unity between the divine, individual self, and the universe.
(C) Immense potential energy and talents for perfection as a human being has the spirit within his heart.
(D) All of the above.

90. The form of ethics that endeavors to help professionals decide what to do when they are confronted with a case or situation that raises an ethical question or moral problem are referred to as:
(A) business ethics
(B) organisational ethics
(C) ethical climate
(D) professional ethics

91. A 'professional' is described as:
(A) employee of an accredited agency
(B) member of a professional who strives to advance his or her personal needs or interests
(C) licensed or certified practitioner
(D) member of a professional who applies specialised knowledge and skills based on the profession's standards of excellence

92. A dereliction of a duty that directly causes damages is referred to as:
(A) impairment
(B) malpractice
(C) professional incompetence
(D) negligence

93. Statement I: Engineers shall hold paramount safety. Health and welfare of the public while performing their professional duties.
Statement II: Engineers shall continue their professional development throughout their careers.

(A) Both Statement I and II are individually true, and Statement II correctly option Statement I
(B) Both Statement I and II are individually true, but I does not explain II
(C) I is true, II is false
(D) I is false, II is true

94. What is a set of attitudes, which implies a motivational orientation, concerning the value of work?
(A) Preventive ethics
(B) Work ethics
(C) Code of ethics
(D) Professional code

95. A code is defined as:
(A) a fundamental belief that usually encompasses several rules
(B) a system of non-statutory, non-mandatory rules on personal conduct
(C) an oath taken by an individual in a ceremony
(D) a guide for conduct and action

96. What refers to the rendition of service by a duly licensed professional by virtue of his technical education, training, experience, and competence?
(A) Professional practice
(B) Professional service
(C) Legal practice and service
(D) Professional consolation

97. Ethical practice and professional practice are
(A) separate issues that should be considered separately
(B) integrally linked
(C) unrelated in that ethical practice does not relate to realistic situations
(D) considered less important than personal standards or practice

98. The underlying reason for a code of professional conduct for any profession is:
(A) the need for public confidence in the quality of service of the profession
(B) that it provides a safeguard to keep unscrupulous people out
(C) that it is required by federal legislation
(D) that it allows licensing agencies to have a yardstick to measure deficient behaviour

99. Which of the following is not usually the objective of a code of ethics?
(A) To create an ethical workplace
(B) To evaluate the ethical components of the proposed actions of the employees
(C) To improve the public image of the company
(D) To enhance the profits of the business continuously

100. Which of the following is/are the characteristics of ethical decision-making?
(A) It is a complex process.
(B) It is not rule-based.
(C) It requires practice and wisdom, not just knowledge.
(D) All of the above.

101. Society has attached special meaning to the term 'professional'. A professional is:
(A) someone who has passed a qualifying exam to enter the job market
(B) a person who is expected to conduct himself requirements of society's laws or regulations
(C) any person who receives payment for the services performed
(D) someone who has both an education in the trade and on-the-job experience received under an experienced supervisor

102. An engineer designs a small structural steel building for a client, using pirated structural design software obtained from the Internet. The engineer later learns that the software gives accurate stress analysis for tension but does not properly predict the buckling of columns in compression. The computer program is patched, and a revised analysis shows that the building is not as safe as first believed. An extreme snowfall could cause the supporting columns to buckle, and the building might collapse completely. Such a severe snowfall occurs about once every 10 years. What should the engineer do?

(A) Destroy all evidence of the revised analysis and hope for good weather.
(B) Contact the client, disclose the problem, and try to negotiate a way to reinforce the columns.
(C) Hire a good defense lawyer for the association's disciplinary hearing against the engineer for negligence and unprofessional conduct.
(D) Contact the client, disclose the problem, and tell the client to sue the software developer.

103. Which statement is true?
(A) Skills not enduring due to fatigue.
(B) The final proof of sincerity and seriousness is the uncompromising emphasis on the integrity of character in a job.
(C) The mental contents of the good person are called moral and ethical values.
(D) All of the above.

104. Human and ethical values or qualities such as courage, vision, social awareness, fearlessness, integrity, a pure and clear mind, truth, etc. are subjective, subtle, and:
(A) intangible concepts
(B) subjective approach
(C) tangible concepts
(D) system

105. Which statement is true?
(A) Human harmony and happiness are the main objectives of any enterprise to justify its survival and progress.
(B) Value relates to the internal domain of business i.e., interactions with employees, customers, suppliers, creditors, the public, etc.
(C) Values should be an integral part of corporate mission, objectives.
(D) All of the above.

106. Decision-making in professional practice and ethical practice:
(A) involves a similar strategy and process
(B) should be considered separate issues
(C) involves very different methodologies
(D) should be left to supervisors and administrators

107. Effective leadership style requires an understanding of which quality?
(A) Sattwa (purity and righteousness)
(B) Rajas (aversion and selfishness)
(C) Tamas (Ignorance and laziness)
(D) All of the above

108. Which one of the following is not a relevant factor in interpersonal skills?
(A) Positive attitude
(B) Doubting the intention of colleagues
(C) Preparedness to listen
(D) Ability to manage emotions

109. Assertion (A): Decision-making required practice and wisdom, not just knowledge.
Reason (R): Decision-making is fundamentally choosing the ideal set of conditions.
(A) Both (A) and (R) are individually true, and (R) does not explain (A).
(B) Both (A) and (R) are individually true, but does not explain (A).
(C) (A) is true, (R) is false.
(D) (R) is true, (A) is false.

110. Decision-making is (simplistically) typically described as which of the following?
(A) Deciding what is correct
(B) Putting preferences on paper
(C) Choosing among alternatives
(D) Processing information to completion

111. Managerial decisions are strongly influenced by:
(A) the organisation's culture
(B) internal politics
(C) power considerations
(D) all of the above

112. Which is the most suitable systematic arrangement for the decision-making process?
I. Defining/identifying the managerial problem
II. Analysing the problem

III. Developing alternative solutions
IV. Select the best solution out of the available alternatives
V. Converting the decision into action
VI. Ensuring feedback for follow-up
(A) I – VI – IV – III – II – V
(B) I – II – III – IV – V – VI
(C) II – I – IV – III – VI – V
(D) VI – I – II – III – IV – V

113. One of the following is not considered a source of obligation.
(A) Law
(B) Contracts
(C) Quasi-delicts
(D) Work

114. An obligation that is not subject to conditions or burdens, nor does it mention a specific date for its fulfillment and as such, it is immediately demandable.
(A) Pure obligation
(B) Condition obligation
(C) Reciprocal obligation
(D) Alternative obligation

115. An obligation is subject to a condition.
(A) Pure obligation
(B) Condition obligation
(C) Reciprocal obligation
(D) Alternative obligation

116. An obligation where two parties are mutually obliged to do or to give something.
(A) Pure obligation
(B) Condition
(C) Reciprocal obligation
(D) Alternative obligation

117. Expected sets of behaviour (etiquette, law, morals, and ethics) between the engineer, other individuals, and society as a whole:
(A) conceptual issue
(B) application issue
(C) legal rights
(D) interaction rules

118. Codes of ethics state the engineer's duties to society, employers, clients, colleagues, subordinates, and the profession. However, when these duties conflict, which group should take precedence?
(A) Employers and clients
(B) Profession
(C) Colleagues and subordinates
(D) Society (The public)

119. The national society of professional engineers had a code, which requires professionals to:
(A) dissociate themselves from organisations that are of a questionable character
(B) further the cause of public good
(C) advise clarity, the consequences, if a technical opinion is overruled by a non-technical person
(D) all of the above

120. Unethical behaviour is often triggered by:
(A) pressure from higher management to achieve goals
(B) an organisational atmosphere that condones such behaviour
(C) both A and B
(D) a system of checks and balances

121. The form of ethics that recognises the impact of organisational factors to guide decision-making is:
(A) values ethics
(B) organisational ethics
(C) applied ethics
(D) professional ethics

122. The relational dimension involves:
(A) the relationship between the counselor and his or her advisor
(B) the study of the client's family and family dynamics
(C) the capacity for trust, mutuality, ethical sensitivity, and acceptance of uniqueness
(D) how well the counselor can relate to the client

123. In terms of confidentiality, clients should be informed in writing.
(A) The extent to which confidentiality will be maintained in terms of provider communications.

(B) How data that they provide on clinical outcomes inventories will be held confidential.
(C) The extent to which confidentiality will be maintained in terms of written records.
(D) All of the above

124. Confidentiality promotes positive changes in clients because it helps provide a context for the experience of:
(A) positive emotional experiences
(B) trust
(C) safety
(D) all of the above

125. From a risk management perspective, protecting client confidentiality is a primary value to reduce the risk of _____.
(A) client suicide
(B) malpractice claims and other civil lawsuits
(C) client dissatisfaction
(D) premature termination from counseling

126. Which of the following terms refers to a view and attitude toward work as determined by intrinsic values and aspirations and the experience of working which is reflected in thoughts, feelings, and behaviour about work?
(A) Working competence
(B) Professional competence
(C) Work orientation
(D) Standard of care

127. The incapacity to perform the function of the supervisory role due to a lack of training, experience, unwillingness, or inflexibility is referred to as:
(A) supervisee incompetence
(B) supervisor incompetence
(C) supervisor impairment
(D) vicarious incompetence

128. Which of the following factors shapes the ethical behaviour of the members of an organisation?
(A) The supervisor's behaviour
(B) Organisational culture
(C) Code of culture
(D) All of the above

129. Which of the following can improve 'work ethics'?
(A) establishing a code of ethics.
(B) appoint formal ethical committees in the organisation to look into ethical issues.
(C) teaching ethics in training programs.
(D) all of the above.

130. How is the closeness or commonness of attitude, behaviour, trust, and performance within the organisation designated?
(A) Cohesion
(B) Morale
(C) Communication
(D) Leadership

131. An organisation's obligation to act to protect and improve society's welfare, as well as, its interests is referred to as:
(A) organisational social responsibility
(B) organisational social responsiveness
(C) corporate obligation
(D) professional ethics

132. Which of the following factors are associated with 'motivation'?
I. Money
II. Psychological and social security
III. Self-esteem
IV. Good interpersonal relations
(A) All of the above
(B) Only I
(C) Only I, II, and III
(D) None of the above

133. Engineers today are usually quite sensitive to issues of social responsibility and ethical behaviour because of _____.
(A) interest groups
(B) legal and governmental concerns
(C) media watch
(D) all of the above

134. Which is not a type of whistleblowing?
(A) Internal
(B) External

(C) Anonymous
(D) Ethical

135. Assertion (A): Whistle blowing should be the last resort for an employee.
Reason (R): Whistle blowing should be used only when all the formal procedures have been exhausted.
(A) Both (A) and (R) are individually true, and (R) correctly option (A).
(B) Both (A) and (R) are individually true, but (R) does not explain (A).
(C) (A) is true, (R) is false.
(D) (R) is true, (A) is false.

136. Which of the following is not an aspect of corruption?
(A) Acceptance of bribes
(B) Bypassing rules to benefit a contractor
(C) Misusing official authority for some personal
(D) Whistleblowing

137. Which is/are required parameters for good governance?
(A) Rule of law
(B) Transparency
(C) Accountability
(D) All of the above

138. If there is evidence that the whistle-blower is motivated by _____ then the legitimacy of the act of whistle-blowing must be questioned.
(A) his or her value system
(B) the opportunity for financial gain
(C) accountability
(D) all of the above

139. This is/are statement correct about Whistle bowling.
I. Whistle bowing always involves a conflict between loyalty to the company and loyalty to society.
II. Engineer should directly use external whistle-blowing tools to protect society from the hidden harmful act of polices.
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

140. Whistle blowing is ethical under the act of the following condition except:
(A) when the motivation is financial gain
(B) when the employee identifies a serious threat of harm
(C) when the country will cause serious and considerable harm to the public
(D) when the employee's immediate senior does not act, and the internal procedure chain of command has been exhausted

141. Which of the following statements is/are correct?
(A) Whistle blowing may be internal or external.
(B) Whistle-blower must reveal his identity.
(C) Whistle-blower must keep the identity.
(D) Both (A) and (B).

142. Which of the following are measures to achieve probity?
I. Strengthening RTI
II. Involvement of ICT tools and technology
III. Non-standardisation of codes of conduct
(A) Only I and II
(B) Only I and III
(C) Only III
(D) All of the above

143. Which of the following are types of accountability?
I. Diagonal
II. Internal
III. Judicial
IV. Legislative
(A) Only I, II, and III
(B) Only I, II, and IV
(C) Only II, III, and IV
(D) All of the above

144. Which of the following situations arises when a supervisor is involved in competing roles or has competing interests that could affect the supervisor's ability to faithfully exercise sound professional judgment and skill?

(A) Informed consent
(B) Conflict of interest
(C) Duty to protect
(D) Incompetency

145. Accountability of the government towards parliament is called:
(A) judicial
(B) legislative
(C) internal
(D) external

146. Which of the following are disadvantages of e-governance?
I. Huge expenditure
II. Digital divide
III. Privacy
IV. Data severity
(A) Only I, II, and III
(B) Only I, II, and IV
(C) Only II, III, and IV
(D) All of the above

147. A situation in which an engineer's loyalty and obligations may be compromised because of self-interests or other loyalties and obligations.
(A) Conflict of interest
(B) Conceptual issue
(C) Concern of interest
(D) Interaction rules

148. Occasionally, a conflict of interest may occur accidentally or unavoidably. In such cases, the best course of action is to:
(A) keep the conflict-of-interest secret but try not to let it affect your decisions
(B) disclose the conflict to a fellow engineer and ask for advice
(C) ignore the conflict of interest; it is one of the benefits of a professional job
(D) disclose the conflict to your employer and anyone else directly involved

149. Which of the following reprehensible actions is a conflict of interest?
(A) Failing to correct or report a situation that may endanger the public
(B) Sealing a drawing by an unlicensed person, not under your direct supervision
(C) Accepting a secret commission from a supplier for buying the supplier's products
(D) Making public statements that are not based on firm knowledge and conviction

150. As an engineer, you may:
I. take assignments in areas you are not competent in
II. accept professional commissions, even if your professional judgment is getting compromised
Which of the above statements(s) is/are correct from an ethical point of view?
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

151. Consider the following with respect to conflict of interest.
I. Moonlighting
II. Insider Information
III. Execution of a project and the evaluation of the same project
Which of the above constitutes a conflict of interest?
(A) I and II only
(B) II and III only
(C) I and III only
(D) All of the above

152. Consider the following statements regarding accountability.
I. Accountability involves only answerability and no enforceability.
II. The offending party may be sanctioned for a thing for which he/she is accountable.
Which of the above statement(s) is/are correct?
(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

153. Ethics can be defined as:
I. set of dogmas
II. framework for right action
III. guide to individual action
IV. standards of evolution
Which of the above statements are correct?

(A) I, II, and III
(B) All of the above
(C) II, III, and IV
(D) II and III only

154. The presence of ethical dilemmas in engineering indicates:
I. that something has gone wrong
II. the presence of moral complexity
III. that engineering is a simple moral endeavor
Select the correct answer from the following codes.
(A) I only
(B) I and III only
(C) II only
(D) I and II only

155. Humans, as well as engineers, are:
I. role-specific
II. context-specific
III. value-free
Select the correct answer from the following codes.
(A) I only
(B) I and II only
(C) I and III only
(D) All of the above

156. Ethics asks us:
I. to live mindlessly
II. to watch how we act
III. to consider moral consequences of action
IV. to act first and think later
Select the correct answer from the following codes.
(A) All of the above
(B) II and III only
(C) I and IV only
(D) II, III, and IV only

157. The point of ethics is to:
I. moralise
II. dictate what is to be done
III. offer tools for thinking
Select the correct answer from the following codes.
(A) I only
(B) II only
(C) III only
(D) All of the above

158. Which of the following are character traits of a moral person?
I. Industrious
II. Reliable
III. Trustworthy
IV. Physically courageous
Select the correct answer from the following codes.
(A) All of the above
(B) I and II only
(C) II and III only
(D) I and IV only

159. Which of the following is not behaviour exhibited by a moral person?
I. Being insensitive to others
II. Having a closed mind
III. Doing the right thing
Select the correct answer from the following codes.
(A) I only
(B) II only
(C) III only
(D) I and II only

160. Which of the following is not a type of courage?
(A) Physical
(B) Moral
(C) Social
(D) Psychological

161. Consider the following statements.
I. Managers must use influence to encourage workers to action.
II. Influence is the ability to bring change and produce results.
III. People derive influence from their higher qualifications.
Which of the above statements are correct?
(A) I and II only
(B) I and III only
(C) II and III only
(D) All of the above

162. Which of the following is/are dimensions of ethical decision-making?
I. Impartial
II. Following decisional procedures

III. Considering wider implications
IV. Holding to religious values

Select the answer from the given codes.

(A) All of the above
(B) I, II, and III only
(C) III only
(D) I and III only

163. Which of the following is/are the elements of trust?

I. Belief
II. Mutuality
III. Predictability

Select the correct answer from the following codes.

(A) I only
(B) II only
(C) III only
(D) All of the above

164. Moral autonomy for an engineer is often emphasised because:

(A) it allows an engineer to transfer his values to professional situations
(B) it fosters the ability to think independently in professional relations
(C) it enables the engineer to use his moral thinking to deal with professional situations
(D) none of the above

165. From a public service engineering perspective, means:

(A) demonstrating insularity
(B) fulfilling demanding role obligations
(C) denouncing accountability
(D) being opaque in decision making

166. Which one of the following values are correctly matched?

(A) Representativeness: democratic value
(B) Efficiency: human value
(C) Innovation: ethical value
(D) Excellence: human

167. Ethical action is:

I. based on emotion rather than thought
II. based on thoughts rather than principles
III. based on unsound values

Select the correct answer from the following codes.

(A) I only
(B) II only
(C) III only
(D) None of these

168. Consider the following statements regarding values.

I. Values are affective dispositions towards a person, object, or idea.
II. Values are social constructs that influence.
III. Values are qualities that are considered worthwhile or desirable.

Which of the above statements is/are correct?

(A) I and III only
(B) II and III only
(C) III only
(D) All of the above

169. Conflict of interest can be avoided by:

I. being responsive to the public interest
II. being subjective in making decisions
III. accepting gains from public office

Select the correct answer from the following codes.

(A) I only
(B) II only
(C) III only
(D) None of these

170. Moral inversions are situations,

I. where people participate in evil activities under false beliefs
II. in which evil is repackaged as good
III. in which good actions have evil results

Select the correct answer from the given codes.

(A) I and II only
(B) All of the above
(C) None of the above
(D) III only

171. The principle of fidelity or promise-keeping recognises an obligation to honor:

I. decision-making procedures
II. basic obligations of office
III. the lines of authority

IV. assignments that may be abusive or off the record

Select the correct answer from the codes.

(A) All of the above
(B) I, II, and III only
(C) I and II only
(D) II, III, and IV only

172. Building trust is an essential ethical skill for a professional and which of the following are ways of building trust?

I. Fulfilling obligations of the relationship
II. Fulfilling obligations of office
III. Honoring obligations of an oath
IV. By being honest

Select the correct answer from the given codes.

(A) All of the above
(B) I and II only
(C) I, II, and III only
(D) II and III only

173. Consider the following statements.

I. Knowledge is information of which someone is aware.
II. Wisdom is the ability to make correct judgments and decisions.

Which of the above statements is/are correct?

(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

174. 'Environmentalism as an ethics' means:

(A) the concern for human life, the outcome of environmental damage
(B) the concern for the preservation of nature of its solution, treating it as an organism
(C) both of the above
(D) none of the above

175. Which of the following may be possible solutions to environmental problems?

(A) Technical modification of the existing process
(B) Use of alternative technologies
(C) Non-technological solutions
(D) All of the above

176. According to the concept of moral intensity, a worker is most likely to behave ethically and legally when:

(A) a manager observes his or her behaviour closely
(B) the worker has intense morals
(C) the consequences of the act are minor
(D) the consequences of the act are substantial

177. Which of the following does not contribute to the development of an engineer's standard of ethics?

(A) Competitor behaviours
(B) Society's norms and values
(C) Individual life experiences
(D) Environmental situations

178. Which of the following statements most accurately describe the nature of an ethical issue in engineering?

(A) Ethical issues can be resolved by following the guidance of religious beliefs.
(B) Ethical issues are difficult because all the choices may do some harm.
(C) Ethical issues can be resolved if you do what you think is right.
(D) Ethical issues are difficult because the results of a decision are hard to predict.

179. A high-commitment approach to environmental issues may include all of the following except:

(A) risk analysis
(B) stakeholder analysis
(C) greenwashing
(D) strategic sustainability auditing

180. Consider the following statements regarding plagiarism.

I. Using the intellectual property of others without their permission.
II. It is ethically incorrect.

Which of the above statements is/are correct?

(A) I only
(B) II only
(C) Both I and II
(D) Neither I nor II

181. Intellectual Property Rights (IPR) protect the use of information and ideas that are of:
(A) ethical value
(B) moral value
(C) social value
(D) commercial value

182. The term 'Intellectual Property Rights' covers:
(A) copyrights
(B) trademarks
(C) geographical Indications
(D) all of above

183. Consider the following statements regarding plagiarism.
I. giving an incorrect reference for information one uses is a plagiarism
II. if one uses a substantial amount of information from the internet/web without the author's permission for commercial purposes then it is considered a violation of copyright law and the person can be sued.
Which of the above statements is/are correct?
(A) I Only
(B) II Only
(C) Both I and II
(D) Neither I nor II

184. Engineers need to be aware of the types of patents that are granted, consider the following.
I. Utility patent
II. Geographical indicator
III. Design patent
IV. Trademark
Which of the above types of patents are granted?
(A) I and III
(B) I, II, and III
(C) I, III, and IV
(D) All of the above

185. Which of the following statements on confidentiality and privacy is/are correct?
(A) Confidentiality is a right while privacy is an agreement between two individuals.
(B) Privacy is connected to autonomy while confidentiality is connected to secrecy.
(C) Confidentiality is more person-oriented while privacy is more ideal thought oriented.
(D) All of the above

186. Issues in academic integrity include:
(A) fabrication
(B) plagiarism
(C) sabotage
(D) all the above

187. Intentionally violating the rules of fair play in any academic exercise is called:
(A) cheating
(B) fabrication
(C) misrepresentation
(D) theft

188. Match list-I and list-II and select the correct answer by the following codes.
List I
A. Moral
B. Amoral
C. Non-moral
List II
I. Related to right or wrong
II. Out of the realm of morality
III. Having no moral sense

	A	B	C
(A)	I	II	III
(B)	I	III	II
(C)	II	III	I
(D)	III	II	I

189. A painting may have:
(A) no moral value
(B) no aesthetic values
(C) only moral value
(D) both moral and aesthetic value

190. Values are:
I. only objective
II. only subjective
III. relatively stable with time
IV. always positive
Select the correct answer using the correctness of the given statements.

(A) I, II, and III
(B) II, III, and IV
(C) III only
(D) III and IV

191. Morality is the 'Summum Bonum' which means?
I. Morality is inferior to religion.
II. Morality is the highest ideal to be pursued even beyond religion.
III. Morality is equivalent to religion.
(A) I
(B) II
(C) III
(D) None of the above

192. The criticism of utilitarianism is/are that:
I. it judges the morality of an action based upon its consequences only irrespective of the means to achieve that end
II. it ignores the interests of the minuscule minority in the quest for the greatest happiness of the greatest numbers
III. it excessively focuses on finding one golden rule to be followed
(A) I and II
(B) II and III
(C) I and II
(D) All of the above

193. Which of the following relates to universal causation theory?
(A) Determinism
(B) Fatalism
(C) Utilitarianism
(D) Deontology

194. Fatalism refers to:
(A) all events are irrevocably fixed
(B) humans can change the future
(C) utilitarianism
(D) deontology

195. Soft determinism refers to:
(A) all events are irrevocably fixed
(B) humans cannot change the future
(C) human beings can change the future to a certain extent
(D) none of the above

196. Hard determinism refers to:
(A) all events are irrevocably fixed
(B) human beings cannot change the future
(C) human beings affect the future in a way they and the environment both of these are caused by factors that are not in human control
(D) none of the above

197. Which of the following best describes the criticism of Kant's deontology?
(A) Undue importance to consequence beyond means
(B) Universalisability and consistency as criteria for morality
(C) Undue importance to the character of the agent
(D) None of the above

198. Natural law theory states that:
(A) morality is embodied in nature
(B) god is the supreme truth
(C) natural laws deviate from actual reality
(D) none of the above

199. Match list-I and list-II and choose the correct answer by using the codes below.
List I
A. Moral
B. Manners
C. Etiquettes
List II
I. Related to right or wrong
II. The customary code of polite behaviour
III. A person's outward bearing

	A	B	C
(A)	I	II	III
(B)	I	III	II
(C)	III	I	II
(D)	II	III	I

Answer Key

1. (B)	**2.** (D)	**3.** (D)	**4.** (D)	**5.** (A)	**6.** (A)	**7.** (A)	**8.** (B)	**9.** (C)	**10.** (B)
11. (A)	**12.** (B)	**13.** (D)	**14.** (D)	**15.** (C)	**16.** (C)	**17.** (B)	**18.** (A)	**19.** (A)	**20.** (D)
